Professional Summary

Senior Full Stack Developer with over 6 years of experience, specialized in React and TypeScript with a solid foundation in Java / Spring Boot. Over the past year I took on a Product Engineer role, working directly with users to gather requirements, plan them with the team and implement them end to end, leveraging AI tools (Cursor, Claude) to broaden my technical reach and speed up delivery. I do my best work on large-scale projects where technical debt, technology heterogeneity and delivery speed are the core challenge. I work consistently and autonomously, with a focus on leaving the code better than I found it. Experienced in mentoring Junior developers and leading teams of 2 to 4 people.

Technical Skills

- Frontend: React (Hooks, Context, Next.js), TypeScript, JavaScript (ES6+), Redux, TanStack Query, Zustand
- Backend: Java (Spring Boot), REST APIs, microservices architecture, Node.js (Express), Python (Django)
- Applied AI: OpenAI API integration for automation agents, Cursor and Claude as full stack development assistants
- Testing: Vitest, React Testing Library, Cypress, Jest
- Databases: PostgreSQL, MongoDB, MySQL, Oracle, Redis
- Cloud & DevOps: AWS (S3, Lambda, RDS), Docker, CI/CD (GitLab, GitHub Actions), Jenkins, Firebase
- Event-driven architectures: RabbitMQ, working knowledge of Kafka concepts and patterns
- Mobile: React Native
- Other: GraphQL (basic knowledge)

Work Experience

HOUM

Product Engineer | Sept. 2025 – Oct. 2026

- Worked directly with end users to understand their needs and gather product requirements.
- Planned solutions together with the team (product, design and development) and led their end-to-end implementation, actively relying on Cursor and Claude to broaden my technical reach and speed up delivery.
- Built an incident-fixing automation system using the OpenAI API: an agent that detects inconsistencies between system data and generated contract documents, opens a support ticket and attaches a proposed fix in a Pull Request.

Senior Frontend Developer | Apr. 2024 – Sept. 2025

- Gathered requirements for and implemented centralized views to manage the rental process, closing operational gaps that existing tools did not cover.
- Built most of the frontend of an internal comments and notifications system, replacing Slack and Google Chat as the operational communication channel.
- Led the frontend development of a task assignment system with an admin panel to configure availability, vacations and leaves per employee.
- Applied security improvements to the admin platform to meet internal audits.
- Actively contributed to the migration to the company's in-house design system, progressively replacing MUI in a large-scale codebase.
- Continuous technical debt reduction across the platform: filters, tables, validations and parsing.
- Actively used Cursor and AI to speed up development, which allowed me to extend my participation to Django backend projects.

MinutenTag

Semi-Senior Frontend Developer | Nov. 2022 – Apr. 2023

- Developed React features for US clients, integrating business logic with Django and Firebase backends.
- Maintained applications and fixed bugs using Redux, React Drag & Drop and Three.js.

Connectis

Semi-Senior Full Stack Developer / Team Leader | Aug. 2021 – Sept. 2022

- Led client needs gathering and backlog definition, acting as the link between the business and the technical team.
- Built and maintained internal administrative solutions for several Movistar teams, including the public number portability form, with Spring Boot and React.
- Developed REST APIs with Spring Boot for internal Movistar projects.
- Drove the adoption of React and TypeScript in a company mostly oriented to Vue.js, starting projects with React + Spring Boot as technical referent.
- Gave internal tech talks on TypeScript and React for the development team.
- Grew from Junior developer to Team Lead within the same company, leading teams of 2 to 4 people.

Botmaker

Junior Full Stack Developer | Mar. 2021 – Aug. 2021

- Migrated React class components to hooks on the internal platform.
- Implemented UI improvements in admin tools and real-time updates using WebSockets.

OnReady

Junior Full Stack Developer | Aug. 2019 – Mar. 2021

- Took part in various projects supporting the backlog and assisting in client requirements meetings.
- Contributed to the PaQuery mobile app (React Native): driver views, map with routing algorithms, camera, QR/barcode reader and shipment management.
- Collaborated on the complete redesign of Alternativa Teatral, modernizing the UI and building its new payment system integrated with the Mercado Pago API and Spring Boot.
- Implemented an event-driven concurrent session control system for live streams using RabbitMQ, limiting access by active sessions in real time.

Education

Computer Engineering (partial) | 2017 – 2019

Faculty of Engineering, University of Buenos Aires (UBA) – Buenos Aires. Completed coursework in systems and mathematics.
