PROFESSIONAL SUMMARY

Senior Full Stack Developer with over 6 years of experience, specialized in React and TypeScript with a solid foundation in Java / Spring Boot. In my last role I took on a Product Engineer position, leading the full product cycle: user discovery, planning and end-to-end implementation, incorporating AI tools into the development workflow. I do my best work on large-scale projects where technology heterogeneity and delivery speed are the core challenge. I work autonomously, with a focus on leaving the code better than I found it.

TECHNICAL SKILLS

- **Frontend:** React (Hooks, Context, Next.js), TypeScript, JavaScript (ES6+), Redux, TanStack Query, Zustand
- **Backend:** Java (Spring Boot, JPA/Hibernate, Maven/Gradle), REST APIs, microservices architecture, Node.js (Express), Python (Django)
- **Applied AI:** OpenAI API integration for automation agents, Cursor and Claude as full stack development assistants
- **Testing:** Vitest, React Testing Library, Cypress, Jest, JUnit, Mockito
- **Databases:** PostgreSQL, MongoDB, MySQL, Oracle, Redis
- **Cloud & DevOps:** AWS (S3, Lambda, RDS), Docker, CI/CD (GitLab, GitHub Actions), Jenkins, Firebase
- **Event-driven architectures:** RabbitMQ, working knowledge of Kafka concepts and patterns
- **Mobile:** React Native
- **Other:** GraphQL (basic knowledge)

WORK EXPERIENCE

HOUM — Rental platform

Product Engineer | Sep 2025 – Oct 2026

- Gathered product needs and requirements directly from end users.
- Planned solutions with the team (product, design and development) and led end-to-end implementation, incorporating Cursor and Claude to broaden my technical reach and speed up delivery.
- Built an incident-fixing automation system using the OpenAI API: an agent that detects inconsistencies between system data and generated contract documents, opens a support ticket and attaches a proposed fix in a Pull Request, reducing diagnosis and resolution time for incidents.
- Implemented multiple improvements to existing workflows, automating manual tasks and reducing operational overhead for employees on the platform.

Senior Frontend Developer | Apr 2024 – Sep 2025

- Gathered requirements for and implemented centralized views to manage the rental process, closing operational gaps that existing tools did not cover.
- Built most of the frontend of an internal comments and notifications system, replacing Slack and Google Chat as the operational communication channel.
- Led the frontend development of a task assignment system with an admin panel to configure availability, vacations and leaves per employee.

- Applied security improvements to the admin platform to meet internal audits.
- Actively contributed to the migration to the company's in-house design system, progressively replacing MUI in a large-scale codebase.
- Extended my participation to Django backend projects, collaborating on API and service development.

Sabbatical — Apr 2023 – Apr 2024

Took a year-long sabbatical using personal savings to rest and recharge before returning to my career.

MinutenTag — Digital agency

Mid-Senior Frontend Developer | Nov 2022 – Apr 2023

- Developed React features for US clients, integrating business logic with Django and Firebase backends.
- Maintained applications and fixed bugs using Redux, React Drag & Drop and Three.js.

Connectis — Technology consultancy

Mid-Senior Full Stack Developer / Team Leader | Aug 2021 – Sep 2022

- Coordinated client needs gathering and backlog definition, acting as the link between the business and the technical team.
- Built and maintained internal administrative solutions for several Movistar teams, including the public number portability form, with Spring Boot and React; also developed REST APIs for internal projects.
- Drove the adoption of React and TypeScript in a company mostly oriented to Vue.js, starting projects with React + Spring Boot as technical referent.
- Gave internal tech talks and mentored junior developers on TypeScript, React and engineering best practices.
- Grew from Junior developer to Team Lead within the same company, leading teams of 2 to 4 people.

Botmaker — Messaging automation

Junior Full Stack Developer | Mar 2021 – Aug 2021

- Migrated React class components to hooks on the internal platform.
- Implemented UI improvements in admin tools and real-time updates using WebSockets.

OnReady — Automotive e-commerce

Junior Full Stack Developer | Aug 2019 – Mar 2021

- Contributed to the PaQuery mobile app (React Native): driver views, map with routing algorithms, camera, QR/barcode reader and shipment management.
- Collaborated on the complete redesign of Alternativa Teatral, modernizing the UI and building its new payment system integrated with the Mercado Pago API and Spring Boot.
- Implemented an event-driven concurrent session control system for live streams using RabbitMQ, limiting access by active sessions in real time.

EDUCATION

Computer Engineering (partial) | 2017 – 2019

Faculty of Engineering, University of Buenos Aires (UBA) — Buenos Aires.

Completed coursework in systems and mathematics.
